

IPS-M790

M790 Automated pH and ORP Controller

Application: Commercial and Residential;
Works Well with Salt, Tab or Chemical Feeders.

Maintain consistent pH and sanitizer levels through out the day, assuring the chemicals are balanced and the water is clean and clear.

Automatically monitor, adjust and dispense the correct amount of chemicals based on user demand.

Perfect for pools, spas and water features of all sizes, anywhere—hotels, condominiums, aquatic centers, schools, public facilities, homes and more.

Attractively priced for commercial users, the M790 is designed to turn on the salt chlorinator generator, or a chemical pump, or a tablet feeder. And, for pools operating with salt chlorine generators which can create a high pH environment, the M790 is an ideal complement to keep the pH levels in line.

Quick and simple to operate, easy installation right out of the box and system set up takes just minutes. It's rare, but if technical support is needed, we are just a phone call away.

Specifications

- ✓ pH set level 7.0- 8.0
- ✓ ORP set level 400-900
- ✓ Default high/low alert settings
- ✓ Readout – LED with digital display
