

Filter Replacement Service

Description

Replace existing failed filter with a new filter of the same model or type.

Services Include

- Disconnection from existing plumbing utilizing unions, if no unions are present, the filter will be cut out.
- Removal of the filter media.
- Old filter and media left on site for local disposal.
- Remove existing filter.
- Installation of new filter in same location of old filter.
- Connection of multiport to the filter union.
- Installation of filter media per manufacturer's specifications.
- Start up and test system for proper working order.

Options

- Removal of old sand, gravel or glass media from site for remote disposal.

Notes

- Adequate unobstructed access to and from the location exists.
- Existing plumbing is of standard configuration, including manual external bypass if required.
- Adequate electrical circuitry exists at location for connection to new equipment (if required).
- Obstructed access to and from the equipment location, (landscaping, fencing, stairs, blocked by existing plumbing or equipment, etc.), may involve additional costs.
- Additional circulation system plumbing, venting, gas connection or electrical work quoted on a per job basis.
- Services assume that existing sand remains in granular hand moveable form. Solidified, calcified or sand media that is not removable by conventional vacuum and hand methods will necessitate additional charges quoted upon discovery.

Availability

- Available in all North and Central American markets.
