

Heater Clean Inspect and Overhaul Service

Description

Complete cleaning, inspection and overhaul for combustion style heaters.

Services Include

- Removal of burner tray
- Cleaning of burners.
- Inspection of combustion chamber and components.
- Inspection of heat exchanger and components.
- Vacuuming of combustion chamber.
- Hand cleaning of heat exchanger.
- Inspection of ignition, combustion and flame quality.
- Adjustment as needed.
- Wipe down external heat exchanger and combustion chamber.
- Re-assembly and test.

Options

- Technician will advise owner of items in need of care or repair.

Notes

- Adequate unobstructed access to and from the location exists.
- Any problems beyond normal wear items reported and quoted upon completion.
- A “tune-up” nearly always becomes an “overhaul” after inspection on indoor vented heaters that have not had this service performed in several years. The internal bypass is also inspected and often replaced.
- Heaters installed indoors, we strongly recommend this service every few years.
- Clogging of the heat exchanger from adequate draft air movement is one of the largest contributors to pre-mature heater failure.
- Service described is for conventional draft heater designs. Does not include opening and servicing of sealed combustion chambers.

Availability

- Available in all North and Central American markets.
