

## Underwater Pool Light Replacement

### Description

Installation of replacement underwater pool light with same or similar model.

### Services Include

- Turn off power to the light at junction box.
- Remove existing pool light from niche and cut cord of existing light.
- Attach pull string and pull existing light cord from junction box to light niche.
- Pull new cord through existing conduit to junction box.
- Connect new light cord to at junction box.
- Install new pool light in niche and secure.
- Turn power on to test light.
- Operate light to check connectivity.

### Add-On Options

- Deck power washing - removes dirt, grime, mold and mildew, which can lead to slippery surfaces.

### Notes

- Installation specifications assume that adequate unobstructed access to and from the location exists.
- Existing light, cord, and niche must be free of corrosion and light cord must pull easily through to the junction box.
- Pools that require draining below light for technician to enter the pool to install new light will incur additional fees.
- Lights, cords, niches, trim with excessive corrosion and cords lengths longer than 15 feet may incur additional Charges. Charges will be addressed onsite at time of replacement.
- Any excess time required to pull extended length cord (old out or new one in) through conduit to and from junction box will incur additional fees, underground conduit is not included.
- Difficulties identified beyond standard installation will be done on a time and material basis upon owner acceptance.

### Availability

- Available in all North and Central American markets.
