

POOL & SPA WATER TESTS

1. Keep test kit out of reach of children.
2. Read precautions on all labels.
3. Store test kit in cool, dark place.
4. Replace reagents once each year.
5. Do not dispose of solutions in pool or spa. Instr. #5311
6. Rinse cells before and after each test.
7. Obtain samples 18" (45 cm) below water surface.
8. Hold dropper bottle vertically when dispensing reagent.

Free Chlorine Test

1. Rinse and fill chlorine / bromine cell to mark with water to be tested.
2. Add 5 drops R-0001 and 5 drops R-0002. Cap and invert to mix.
3. Match color with color standard. Record as parts per million (ppm) free chlorine (Cl_2). See Dosage Charts for adjustment.

Total Bromine Test

1. Rinse and fill chlorine / bromine cell to mark with water to be tested.
2. Add 5 drops R-0001 and 5 drops R-0002. Cap and invert to mix.
3. Match color with color standard. Record as parts per million (ppm) total bromine (Br_2). See manufacturer's instructions for adjustment.

pH Test

1. Rinse and fill pH cell to mark with water to be tested.
2. Add 5 drops R-0014. Cap and invert to mix.
3. Match color with color standard. Record as pH units. If sample color is between two values, pH is average of the two. See Dosage Charts for adjustment.

Upgraded Kits Available

This kit is designed for testing pools and spas with low bather loads. Upgrading to a **DPD kit with more tests** is recommended for those with higher usage or recurrent water problems such as pH "bounce," algae, strong odor, eye irritation, bleaching, staining, or corrosion.

For Chlorine Chart

*Chlorine products contain different amounts of available chlorine. Adjust treatment amounts accordingly.

For pH Chart

**Sodium bisulfate percentage may vary. Adjust treatment amounts accordingly.

Dosages obtained experimentally using pool water with the following values:

Total Alkalinity ~100 ppm CaCO₃
Total Hardness ~200 ppm CaCO₃
Total Dissolved Solids ~350 ppm
Temperature ~75°F (24°C)

Dosages can vary if actual values differ from experimental values.
